

EUROPA PLUS

Flanged Stainless Steel High Pressure
Twin Wall Exhaust System

EUROPA PLUS is British built and specifically designed for today's high performance appliances, offering an engineered system capable of meeting the demands for high temperature and high pressure applications.

EUROPA PLUS

Flanged Stainless Steel High Pressure
Twin Wall Chimney System

EUROPA PLUS has been specifically designed for today's high performance appliances and generators, offering an engineered system capable of meeting the demands of high temperature and high pressure applications.

EUROPA PLUS is a double walled prefabricated stainless steel chimney system, available in a range of insulation thickness to meet the most demanding applications. As standard, EUROPA PLUS incorporates a 25mm high performance insulated cavity, with the option to increase the cavity thickness to 50mm and 100mm for applications that demand critically controlled surface temperatures.

EUROPA PLUS is offered in an extensive range of fittings and fixings covering sixteen internal diameter sizes ranging from 100mm to 1200mm.

Suitable for continuous flue gas temperatures up to 600°C (T600) and positive pressure applications up to 5000 Pa (H1). The product has also been tested under soot fire conditions at 1000°C for 30 minutes and is certified for fire resistance.

The joint is of a matting flange construction and incorporates a location spigot for easy alignment during installation. Depending on the size, pressure and condensate integrity is achieved either using a composite graphite gasket or the use of a high or low temperature sealant. A clamp band is then secured around the mating flange to secure the joint and finished with a Channel Band.

Typical Applications

- Generators
- CHP
- Particle Extraction
- Kitchen Extract Ducts
- Commercial Boilers
- Condensing Appliances
- Off-Shore Installations
- Smoke Extraction
- Fire Rated Compartments

Specification and Performance Designations

EUROPA PLUS (DN100 to DN600)

Inner Liner: 0.6mm 316L stainless steel
Outer Case: 304 BA stainless steel
Cavity: 25mm insulated with Insulfrax 128Kg/m³ AES high density blanket
Joint Construction: U-Band and composite graphite flange gasket.

EUROPA PLUS (DN650 to DN1200)

Inner Liner: 1mm 316L stainless steel 1.2mm above 1000ID
Outer Case: 304 BA stainless steel
Cavity: 25mm insulated with 250Kg/m³ high density loose fill mineral wool
Joint Construction: Vee Band utilising high or low temperature sealant depending on application.

Approvals

EUROPA PLUS is manufactured and tested to the requirements of EN 1856-1 to the performance designations as detailed above. EUROPA PLUS is CE marked under the Construction Products Regulation, Certificate No's. 0036 CPR 9145. In addition, EUROPA PLUS is also UKCA marked, Certificate No's 0168 CPR 91455, both administered by TÜV Industrie Service GmbH.

Other Approvals

EUROPA PLUS is listed by UL in North America and Canada as follows:

North America

UL103 : USA requirements for Factory-built Chimneys for Residential Type and Building Heating Appliances
UL2561 : 1400 Degree Fahrenheit Factory-Built Chimneys
UL1777 : Chimney Liners
UL1738 : Venting Systems for Gas-Burning Appliances, Categories II, III, and IV

Canada

ULC/ORD-C959-1993 : 540°C and 760°C Industrial Chimneys
ULC-S635-00 : Lining Systems for Existing Masonry or Factory-Built Chimneys or Vents
ULC-S636-08 : Type BH Gas Venting Systems

Quality Management

All components are manufactured under a quality management system, certificate No. FM557622, administered by The British Standards Institute in accordance with BS EN 9001: 2015.

Fire Resistance Approvals

EUROPA PLUS DN100 - DN600

Tested by Appos Laboratories to EN 1366-13 - Fire resistance tests for service installations - Chimneys.
Report 22/32302474-2

$$EI\ 180\ (o \rightarrow i)\ h_o\ v_e$$

Tested and assessed by the Building Research Establishment (BRE) offering a 4 hour fire resistance in accordance with the integrity criteria of BS 476 Part 20. Test Report 302589 Issue 2 and Assessment Reports P120607-1001

EUROPA PLUS DN650-DN1200

Tested by the Loss Prevention Council offering a 4 hour fire resistance in accordance with the stability and integrity criteria of BS 476 Part 24 Duct Type B. Reports TE6696 and TE7109.

Warranty

EUROPA PLUS is backed up by a comprehensive 20-year products defects warranty. The 20-year warranty is a measure of our confidence in the quality and reliability of our products, giving added peace of mind for any installation.

Partner with us, succeed together.

Do you need any assistance with your residential or commercial flue project? Our team of experts are on hand to help you at every stage. We offer design assistance, site surveys and work with experienced installers who offer full turnkey packages tailored to your needs.

www.sflchimneys.com
info@sflchimneys.com
01271 326633

Cavity	Inner	Outer	Code
Single Wall	316L	-	679XXXX
25mm Insulated	316L	304	674XXXX
50mm Insulated	316L	304	644XXXX
100mm Insulated	316L	304	684XXXX

Depending on the insulation thickness, replace the part number prefix as above. For example, a 200ID x 1000mm Length with 50mm of insulation would be prefixed with 644, making the full part number 6441008.

EUROPA PLUS is also available as a single wall product for low temperature application. For further information, please contact SFL Customer Services.

Flange Adaptor

Used to connect EUROPA PLUS to a flanged connection on an appliance. The flange is supplied fully welded to the adaptor pipe. These are manufactured to order based on the required flange parameters.

Part Number: 67644XX, where XX is the diameter.

Plain Appliance Adaptor

Used to provide a straight connection to an appliance.

Expansion Components

EUROPA PLUS

Expansion components are critical within the design of the system to compensate for thermal linear expansion and contraction. Expansion components need to be installed between two fixed point, usually consisting of two support plates located up and down stream. These provide the reactionary force for the expansion component to react against. Prior to system design it is critical that the installation instructions are fully reviewed and understood, especially in respect to managing expansion and contraction within the chimney system routing.

Expansion Length / Adjustable Length

A lower specification to bellows used for negative and positive pressure applications up to 5KPa (H1 for external applications) or 1.5KPa (M1 for internal applications) at a maximum temperature of 450°C. The expansion length can also be used as an adjustable component on such systems where standard lengths are not suitable for the space required. The Expansion Lengths are available in two sizes (Short and Long) supplied with Cover Jacket and blanket insulation. Note: These components are not load bearing and require adequate bracing.

For adjustment ranges see page 28 or refer to the products installation instructions.

Lined Expansion Bellows

The lined expansion bellow is used to compensate for linear thermal expansion in high temperature and high pressure applications, such as electrical generation engines and turbine systems. Suitable for positive pressure applications up to 14,945 Pa and exhaust gas temperatures up to 760°C.

Insulated Bellow Jacket

Used in conjunction with the Lined Expansion Bellow, in order to close off the products cavity as well as to protect and thermally insulate the bellow. The insulated bellow jacket is supplied in two halves together with insulation blanket and fixings. The quantity of blanket and thickness is determined by both the cavity thickness and the product size.

Note: The outside diameter of the Insulated Bellow Jacket is larger than the outside diameter of the chimney casing, see dimension B.

Equal Tee 90°, 93° & 95°

Designed to provide connection, a change of direction and cleaning access if required. Angled Tees can be used to offer an incline to allow back flow of condensation through the system. Refer to page 29 for vertical loading data.

135° Equal Tee

Used at the base of a vertical chimney, or for horizontal header configurations where a smooth transition is required. Can also be used as an inspection / cleaning point when used with a Blanking Cap or as a drainage component when used with the Drain Tee Cap.

The Lateral Guides and Vertical Supports shown here are only suitable for attachment to non-combustible construction.

Lateral Guides

Guide Band

Guide and lateral support, which locates the vent and at the same time permits linear thermal expansion. This component does not support vertical load.

Wall Guides

Provides lateral support to the product. As standard offers a clearance of 50mm from the surface of the chimney to a non-combustible structure. The internal diameter of all wall guides is 5mm larger than the outside diameter of the chimney to allow for thermal expansion. Please note that these components are not suitable for vertical loading. Manufactured in grade 304 stainless steel.

Fig 1.1: Dimensions - Heavy Duty Version - Sizes 650mm - 1200mm

Floor Guide

Installed at each floor level to ensure correct vertical alignment and free expansion. Maximum hole through floor equals pipe inside diameter plus 250mm. Assembly consists of a Guide Band, 4 struts and nuts / bolts. Manufactured in grade 304 stainless steel.

Both the Wall Support Assembly and Support Plates can be used to take the vertical load of the chimney, and can also be used for bracing when using expansion components. When attached to a structure, adequate fixings must be used determined by both the structure fabric and required loading. Where the Support Plate is used, it must be supported and fixed on all sides. Refer to structural loading information on page 29. Cover Jackets are required to close off the cavity and are ordered separately, see page 21.

Wall Support Assembly

Designed to provide either vertical or horizontal support for the system. The assembly consists of two side brackets, split top and bottom plates, support length and fixing flange. The Wall Support Assembly is designed to provide a 50mm clearance to the structures. Cover Jackets are ordered separately. Manufactured in grade 304 stainless steel.

The Wall Support Assembly is not suitable for direct attachment to a combustible structure

Support Plate Assembly

The Support Plate is design for use with on-site fabricated bracketry as a dead weight support or as thrust / bracing plates for expansion components and for changes of direction. Consists of two Half Plate Sets and a Support Length. The assembly **MUST** be mounted on all four sides to a structural frame and attached to the building structure. Cover Jackets are ordered separately. Manufactured in grade 304 stainless steel.

Corresponding Cover Jacket set required (See Page 21)

Used with a 90° Elbow
for vertical chimney
terminations.

Universal Flat Flashing

For flat or nearly flat roofs. If vertical expansion exceeds 100mm, use the telescopic Flat Flashing.

Height of cone is 250mm from base plate.

32° - 45° Flashing

For sloping roof penetrations of angles between 32° and 45°.

NOTE 1 - Flashings for these sizes as well as sizes greater than 650mm are manufactured to the customer's specific requirements and dimensions and must be confirmed prior to order.

Telescopic Flat Flashing

This component weatherproofs the EUROPA PLUS's passage through the roof, and must be used where the expansion of the duct is calculated to exceed 100mm. The telescopic drum section of the flashing is secured to the roof. The storm collar is located with silicone sealant to the outer EUROPA PLUS casing and is free to rise with the expansion. Only available for 25mm cavity and up to 600mm.

Ø650 - Ø1200 - Firestop Assembly BS 476 Pt 20 4 Hour

Designed for firestopping where the chimney passes through a fire rated compartment. Suitable for non-combustible walls and floors up to 200mm thick and manufactured from block construction. Please refer to separate installation instructions for advice on using and installing this component.

Fixing Pack for 'U' / Vee Band (Spare)

Comprises 4x cap-head hex bolts and two double-nut backing plates. Fixing packs are supplied with 'U' Bands as standard.

Size (mm)	Code
All Sizes	FXP0008

Standard / Narrow Channel Band

The Channel Band is used to finish the joint and is supplied with a strip of insulation. The Standard Channel Band is provided as standard with all lengths and fittings. The Narrow Channel Band is ordered separately and used where the 'U' / Vee Band secured flanges are providing support, or the component flange is connected to the appliance.

Standard Channel Band
25mm Cavity
A = 115mm

50mm & 100mm Cavity
A = 202mm

Narrow Channel Band
25mm Cavity
A = 49mm

50mm & 100mm Cavity
A = 95mm

Use Sikaflex Weathering Sealant Code: 1758206 when installing channel bands externally that are to be painted

Use appropriate silicone sealant to weatherproof channel bands if installed externally.

1200	6774748	647XX48	647XX52

For Standard Channel Band replace XX with 47

For Narrow Channel Band replace XX with 46

Flange Gasket (Ø100 - Ø600)

The Flange Gasket is used on EUROPA PLUS sizes 100mm - 600mm and supplied as standard with all lengths and fittings. The gasket is supplied with a self-adhesive backing to allow fixing to the flange face.

NOTE: The gasket is extremely delicate. Great care must be exercised during handling.

Before fitting the gasket to the flange face of the spigot end, ensure that the flange face is clean and free of dirt / grease and not damaged or distorted.

Joint Sealants (Ø650 - Ø1200)

Used for the joint construction on EUROPA PLUS sizes 650 - 1200 and also required on some specific components.

Temperature rating is prescribed by the application.

Low temperature Sealant

Used for lower temperature applications where the flue gas temperature does not exceed 250°C. Capable of resisting positive pressures of 5000Pa

Code
1756506

High temperature

Use where flue gas temperatures exceed 250°C. Capable of resisting positive pressures of 5000Pa and temperatures up to 1100°C, once cured correctly.

Code
1783108

Weathering Sealant (Sikaflex)

Used for weather proofing Channel Bands on external applications and where the external casing is to be painted.

Code
1758206

Wall Supports require adequate fixings suitable for the attaching structure. Support Plates must be supported on all four sides.

Where possible, good practice dictates that a tee should be suspended below a support component, so that the tee is not in itself subject to vertical loading from the above components.

When calculating loading, the mechanical and thermally induced loads must be summed. Elbows do not load-bear.

GUIDE AND LATERAL BRACING

The EUROPA PLUS product must be adequately supported or given lateral bracing in accordance with the following table, taking into account the loading characteristics and product weights.

EUROPA PLUS (DN100 - DN600)

Size	Application		Freestanding height above last Support or Guide
	Vertical	Horizontal	
100mm*	4.0 Mtrs	2.5 Mtrs	2.5 Mtrs
150mm - 600mm*	4.0 Mtrs	3.0 Mtrs	3.0 Mtrs

* Where the Cavity is insulated with either 50mm or 100mm insulation, the maximum horizontal distance between supports is reduced to 2.5 metres.

EUROPA PLUS (DN650 - DN1200)

Size	Application		Freestanding height above last Support or Guide
	Vertical	Horizontal	
650mm - 1200mm	4.0 Mtrs	4.0 Mtrs	3.0 Mtrs

Distance to Combustible Materials

All EUROPA PLUS insulated products are designed to offer a 50mm clearance to combustible when installed within an open environment up to an internal diameter of 200mm. For larger diameters the distance to combustible is increased as per the table below. The declared distance to combustible is based on the standard 25mm insulated Cavity as tested to EN 1856-1 with a continuous flue gas temperature of 600°C, and intermittent temperature of 700°C and a sootfire simulation at 1000°C for 30 minutes.

Where the product is installed within a combustible enclosure, the distance should be increased to 100mm from the outer surface of the product. For larger diameters the distance to combustible is increased as per the table below. It is important that both the enclosure and any associated pass-through, such as floors and ceilings are ventilated using SFL's Ventilated Firestop Components. For more information, please discuss with SFL's Technical Sales team.

Required Clearance To Combustible Material

Insulated Cavity (25, 50 & 100mm) (Max Flue Gas Temperature 600°C Continuous / 750°C Intermittent)

Internal Diameter	Distance to combustible from outside diameter of vent	
	Open Environment	Enclosed Within Combustible Ventilated Shaft
100mm - 200mm	50mm	100mm
350mm - 450mm	75mm	150mm
500mm - 600mm	100mm	200mm
650mm and Above	200mm	400mm

Single Wall (Max Flue Gas Temperature 200°C)

Internal Diameter	Distance to combustible from outside diameter of vent	
	Open Environment	
100mm - 200mm	200mm	
350mm - 450mm	300mm	
500mm - 600mm	400mm	
650mm and Above	800mm	

Fire Resistance for Fire Containment in Buildings

SFL offer a range of fire-stopping solutions for fire rated compartment walls and floors. Solutions are available to suit the requirements of BS 476 Part 24, as well as the latest BS EN 1366-13 Fire resistance tests for service installations - Chimneys. Please refer to the installation instructions or contact SFL for more detailed information.

RESIDENTIAL

Vitreous Enamel

SVIT

Quick Installation

Brand Compatibility

No Sealant Required

Year Product Warranty

SVIT® is a vitreous enamel-coated steel connecting flue pipe designed to facilitate the connection between a multi-fuel appliance, an existing brick chimney or a prefabricated twin wall chimney system. It offers a smooth, aesthetically pleasing joint, without the need for additional locking bands or fire cement and is available in 100mm, 125mm, 150mm, 180mm & 200mm.

Twin Wall / Air Gap Insulation

125-150mm Diameter

T250 Rating

Multi-Fuel Appliances

IL® is a twin wall air gap insulated prefabricated domestic and light commercial gas vent system suitable for gas appliances, with draught-hoods or with a flue gas temperature not exceeding 250°C and zero or negative pressure in the flue. Lengths and fittings push and twist lock together to provide strong rigid flue systems and ensure maximum ease of site assembly.

Flexible Liner

SELFLEX

V2 Corrosion Resistant

P1 / N Rating

Year Product Warranty

SELFLEX® is a double skin multi-fuel flexible chimney liner suitable for multi-fuel, gas, and oil-fired applications up to a maximum flue gas temperature of 600°C. CE marked to EN 1856-2. The SELFLEX® family range is suitable for the relining of masonry flues and used with wood, multi-fuel stoves and open fires and is available in three different specifications including 0.1mm 904L, 0.12mm 316L and 0.1mm 316L.

Insulated Flexible Liner

TUBEX PLUS

V2 Corrosion Resistant

Brand Compatibility

125-150mm Diameter

Product Warranty

TUBEX PLUS® is a unique insulated flexible liner for multi-fuel applications that allows maximum flexibility and ease of installation, the insulated core offers excellent thermal resistance to maximise natural draft to ensure optimum efficiency of the appliance with its 13mm high density insulation layer. Ideal for use on modern high-efficiency wood burning and multi-fuel appliance and application.

Single Wall / Connecting Flue

KEPLER HPT is a push-fit twin wall insulated high pressure generator exhaust system suitable for high temperature / high pressure dry non-condensing applications. Supplied as standard with a 50mm high density insulated annulus. Due to its unique design, the KEPLER HPT generator system does not require expansion components, such as expansion bellows. Available in a range of sizes covering Ø80 - Ø600.

SUPRA PLUS® is a British built single wall chimney system designed specifically for today's modern high efficiency appliances that operate under positive pressure and condensing conditions.

Manufactured in 9 diameters ranging from 80mm to 350mm and consists of a range of lengths and fittings which simply push-fit together, and which are secured with a locking band. Seals are factory fitted and bonded for ease of installation. Available with a wide range of support components that cater for both lateral and vertical structural loading of the product. Extended range available from 400mm to 600mm.

NOVA® is a pre-fabricated, factory-made twin-wall, insulated stainless steel chimney system. Suitable for condensing and positive pressure applications and is specifically designed to meet the demands of the latest high-efficiency heating appliances as well as traditional gas and oil-fired combustion equipment. With its unique multi-barb twist-lock jointing system.

Manufactured in 8 internal diameters, ranging from 100mm to 355mm and consists of a wide range of components, together with a strong 16-barb twist lock jointing system, NOVA offers the ultimate in ease of installation and functionality. With its strong joint design, NOVA can achieve a maximum unsupported height of 3.0 metres above the last support (2.0 m for DN100), without the need for structural locking bands.

NOVA is fire resistance tested to BS EN 1366-13 and holds the following classification:

$$EI\ 90\ (o \rightarrow i)\ h_o\ v_e$$

NOVA has also been fire resistance tested for a period of 4 hours under the integrity criteria of BS476 Part 20.

EUROPA PLUS® is a high pressure and high temperature chimney / exhaust system suitable for continuous operating temperatures of up to 600°C continuous and 750°C intermittent. Suitable for positive pressure systems up to 5000Pa (HI) and UL tested up to 14,945Pa.

It is offered as a double walled prefabricated 316L stainless steel chimney system, available in a range of insulation thickness to meet the most demanding applications. As standard, EUROPA PLUS incorporates a 25mm high performance insulated cavity, with the option to increase the cavity thickness to 50mm and 100mm for applications that demand critically controlled surface temperatures.

EUROPA PLUS® is fire resistance tested to the requirements of BS EN1366-13 up to 600mm:

$$EI\ 180\ (o \rightarrow i)\ h_o\ v_e$$

Above 600mm EUROPA PLUS is fire resistance tested to the integrity and stability requirement of BS 476 Part 24 for a period of 4 hours.

About SFL

British manufacturer of flues & chimneys for residential & commercial applications for more than 50 years.

Commercial Solutions and Project Assistance

For large-scale installations in commercial buildings, we manufacture a range of flue systems with ease of install at the centre of your design. From complex header configurations to large-diameter stacks, we can accommodate almost every requirement for any application.

At SFL, we work with carefully selected installation partners to ensure your turnkey package is carried out on time within budget by seasoned professionals.

We're committed to offering industry-leading technical support services, throughout the whole process of design, manufacture, and supply of your upcoming project. Our experienced team are on hand to assist you at every stage of your project. From initial product selection to flue routing and calculations.

Residential Solutions

From wood burning & multi-fuel stoves to gas fires & oil boilers, our time-honoured brands of flues and chimneys have been a mainstay of domestic heating for decades. We work with a network of distribution partners providing high-quality residential flue and chimney components for easy installation. With fast delivery times and comprehensive product warranties, we ensure that your requirements are met with quality and reliability.

At the forefront of flue and chimney manufacturing and technology.

Since 1969 SFL have been leading the way in flue and chimney innovation and technology. Our portfolio of trusted chimney and flues brands are known throughout the world for their engineering excellence. We offer industry-leading technical support services throughout the whole process of design, manufacture, and supply for commercial, domestic, and industrial applications, with uncompromised customer service.

We are proud of our British built heritage at SFL. Our manufacturing centre is based in Barnstaple, Devon, UK, alongside our extensive R&D centre, ensuring continuous product development and testing to the latest Standards.

SFL is part of the Sphering group, Sphering is an EU market maker with renowned expertise in design, manufacturing and distribution of advanced air and flue care systems.

WeLab®

As a committed company determined to play an active role towards the environment and society, the Group has its own R&D centre: WeLab®. This facility has allowed the group to comply with the newest European standards (including the NZEB: nearly zero energy building) in terms of security and performance of appliances, but also to adopt a responsible innovation approach. With our WeLab®, we have developed test rigs based on minimum requirements in order to guarantee our clients the highest levels of security and performance.

SFL branded products are synonymous with the highest quality – it is this reputation that enables specifiers, contractors, and householders to use our products with total confidence.
